RADIX ECOSYSTEM · THE COMMUNITY, DISTILLED

Radix Ecosystem Weekly

What the room was really talking about

WEEK 26 · 22 JUN 2026

22–28 Jun 2026

Telegram + RadixTalk

COMMUNITY MOOD · DAY BY DAY

5/10 · same as last week

Previously: agentic payments and wallet maintenance dominated, with flightofthefox holding the technical line and governance tension building under the surface.

A big week for builders: Hyperscale dropped a monster monthly progress report, a new on-chain governance toolkit launched on Radix, and the room argued passionately about whether open source helps or hurts Xi'an. Meanwhile Weft needed a manual fix and volunteers started organising themselves.

WHAT THE ROOM TALKED ABOUT

Hyperscale's big month of commits

tomsn summarised 650+ commits in a month: a leaderless BFT beacon chain, stake pools for running multiple nodes, snap-sync via checkpoints, a daily 20% shard shuffle and work-in-progress live resharding. flightofthefox says hs-rs continues as his own project regardless, and will become Xi'an if the DAO keeps paying milestones.

driven by tomsn, flightofthefox

Open source or proprietary Xi'an

flightofthefox insisted open source is the only way he contributes and the validator network — not the code — is the real moat. Vlad B warned that well-funded incumbents like Cloudflare or Stripe could fork the finished tech and capture the value, leaving XRD holders behind.

Weft hUSDC APR spike fixed

Dave flagged a lending APR spiking past 150% on Weft after a big whale pulled liquidity across several dApps. Gary manually lowered the rate to roughly 15.5%, and the room diagnosed the squeeze within the day.

driven by Dave, Gary, Jelthebest

Volunteers organise for growth

Morten launched a private 'Radix Growth Lab' for marketing volunteers with monthly updates back to MAIN, while Vlad B sketched four working groups (Tech, Growth, Partnerships, DAO management). Daffy cautioned groups can plan now but only execute formally once the Permanent council is seated.

THE BOTTOM LINE

REMEMBER THIS

Hyperscale shipped a staggering month of work — and its lead made clear it's his project, with Radix's Xi'an dependent on the DAO keeping its word.

NEXT WEEK

Watch for: whether the Operating Agreement lands by 29 June and who steps forward for the Permanent council.

From the council & the crowd

What the tracked voices said, and the week's best exchanges.

QUESTION OF THE WEEK

“What’s the difference between Radix and Hyperscale?”

Radix is the community’s project; hs-rs is flightofthefox’s independent open-source Rust implementation of the sharded design. If the DAO keeps paying milestones, he’ll integrate Radix Engine with it as the Xi’an upgrade — but hs-rs continues either way.

ASKED BY AKANZI MWAMI · ANSWERED BY FLIGHTOFTHEFOX

DEBATE OF THE WEEK — OPEN SOURCE VS FORKING RISK FOR XI’AN

ONE SIDE

Open source is the only credible path: the validator network and its honest majority are the moat, and a capable developer could learn the Hyperscale code in months anyway.

THE OTHER

Openly shipping finished sharding tech invites well-funded, compliance-friendly incumbents to fork it, capture users and fees, and leave XRD holders with nothing — strategy and partnerships must come first.

Still open — expect a rematch.

FROM THE NEWS ROOM

Muan governance launches on Radix

Sentura's Nicolai shipped Muan, an on-chain governance framework with ranked-choice, quadratic and recurring treasury actions. He's actively looking for the first projects to onboard hands-on.

muanprotocol.com

Radix Kingdoms turns one

A full year on mainnet: roughly 600 Kingdoms minted, ~50M $KGLD minted and ~23M burned, across ~25k oracle transactions.

Radix Wiki hackathon testimonials

Developer testimonials from the first Radix Wiki hackathon were published, pushing back on the 'nobody builds here' narrative.

FROM THE DEV ROOM

Hyperscale's monthly recap dominated the dev room: a leaderless BFT beacon chain, stake-pool multi-node operation, self-regulating validator parameters and snap-sync via enshrined checkpoints — with live resharding underway.

HEARD IN THE ROOM

> *"The code is NOT the finished product. The Network is the product! That you can't fork (at least not without convincing a majority of validators to fork)"*
>
> — FLIGHTOFTHEFOX

> *"It's far and away the most sophisticated sharded L1 design ever implemented, leap-frogs everything else completely"*
>
> — TOMSN

> *"We're just spinning in circles here and I'll stop. I don't think either of us are wrong, and we'll see how it unfolds."*
>
> — VLAD B

THE PULSE

The mood: Excited about real technical progress, but anxious and argumentative about strategy, transparency and who builds the future.

KEEPING SCORE

The tracker

What the room expects to happen — and how last week's calls went.

PREDICTION TRACKER

PENDING **Operating Agreement finalised by 29 June**
projectShift's stated target; the vote window will show whether it lands.

NEW **Muan onboards its first projects soon**
Nicolai is actively recruiting hands-on integrations.

NEW **Xi'an lands in roughly 18 months**
Deronie's estimate; the room treats it as a long wait.

JARGON, DECODED

Quadratic voting — A voting style where casting stronger votes costs progressively more, so intense minorities can't easily out-shout everyone else.

Beacon chain — A coordination chain that randomly assigns validators to shard groups so no one can predict or capture their assignments.

Resharding — Reshuffling which validators are responsible for which portion of the ledger, done continuously so no group entrenches control.
