What the room was really talking about

COMMUNITY MOOD

4/10

Previously: a winding-up petition and unexplained treasury transfers darkened the room, while the DAO ratification vote and Hyperscale-as-upgrade debate took centre stage.

A bruising but busy week. It opened with a heated argument over flightofthefox and his community proposal, and an HMRC filing that raised fresh questions about former Foundation entities — but by Friday the mood lifted as Timan published a transparent hUSDC recovery list and XRDETH trading quietly returned. Underneath it all, the community began asking itself how to stop the blame game and rebuild governance.

WHAT THE ROOM TALKED ABOUT

The Hyperscale funding fallout

Dezza and GENKIPOOL accused flightofthefox of breaking his community proposal by distancing Hyperscale from Radix and selling part of his grant. He pushed back that he can't be the network's sole hope, saying the best case is a group of people who 'want to clasp hands and do cool shit together'. No reconciliation was reached.

driven by Dezza, flightofthefox (hyperscale.rs), foxyldy

HMRC filing rattles the room

@Andy.XRD shared a UK court filing appearing to show HMRC seeking to wind up an entity over unpaid tax, while insisting the Foundation has not been selling XRD and that mitigation with market makers is underway. Tadjis separately explained the RDXW wind-down: assets stay with Holdings, and liquidator fears are unfounded.

driven by @Andy.XRD, Tadjis, Jelthebest

RAC candidates walk away

Markus withdrew his candidacy for the permanent RAC, and Giles Morris said he's close to following, calling the 90-day ratification timeline too slow and offering a free financial review of the DAO under NDA. A worrying signal for the fledgling governance layer.

driven by Markus, Giles Morris, Daffy

Gateway costs and missing strategy

projectShift warned the gateway is a costly hard dependency that could drain funds — no criticism of Shambu and Marek — while PinkRedDog and flightofthefox agreed a credible go-to-market plan is missing, even though scaling work matters regardless.

driven by projectShift, flightofthefox (hyperscale.rs), PinkRedDog

THE BOTTOM LINE

REMEMBER THIS

Timan's fully open-source hUSDC recovery list — verifiable by anyone — is the concrete step that started winning trust back.

NEXT WEEK

Watch for: the Hyperlane bridge's return and next week's promised progress on freeing the stuck hUSDC deposits.

More from the room

The week had more conversations than one page could hold.

THE CONVERSATIONS, CONTINUED

hUSDC recovery takes shape

Timan published a full overview of accounts eligible for recovery from the stuck ~442k hUSDC transaction, with open-source code anyone can rerun, and clarified it covers only that transaction. RocketX re-enabled XRDETH trading; Hyperlane is expected back once recovery completes.

driven by Timan, Leo, @Andy.XRD

ALSO THIS WEEK

- Timan unregistered the DeXter validator and asked remaining stakers to move their 2.8M XRD.
- bigdev_xrd suggested posting paid promo-video tasks with acceptance criteria on radixguild.com.
- Vlad B proposed a SaaS model where developers bulk-buy XRD to cover user fees; Mr. Peanutbutter warned it concentrates buying power.
- Vlad B argued the former entity's VASP license should have gone to the DAO; Prophet noted licenses can't simply be transferred.

From the council & the crowd

What the tracked voices said, and the week's best exchanges.

COUNCIL & INSIDER WATCH

projectShift posted an official RAC update on the current instability, stressing that council members know nothing more about Foundation finances than the community does, and boosted Timan's hUSDc recovery overview on the RAC channel.

flightofthefox (hyperscale.rs) HYPERSCALE DEVELOPER

Fended off accusations over his community proposal, said the network lacks a go-to-market plan and DeFi builders, and explained his simulation testing: nested finite state machines driven by a deterministic seed, with AI debugging the failures.

"can a lad just work on tech without being some avatar of the project?"

projectShift RAC MEMBER

Posted the RAC's official update, clarified the council has no extra insight into Foundation assets, and flagged the gateway as an unsustainable cost the network must fix.

"If you were a RAC member rn, you would know nothing different or more detailed regarding any financials, assets and similar that what you do."

@Andy.XRD FOUNDATION LIAISON

Said the Foundation is in constant talks with Hyperlane to recover stuck deposits, revealed a near-miss native USDC partnership, and pointed to market-maker mitigation protecting Foundation assets.

"Wheels in motion for next week"

QUESTION OF THE WEEK

"How long will the proposal window be, and can the result be manipulated at the last minute?"

Bayesian explained the short window is only for testing; on mainnet it will be 48 hours, and the futarchy system uses a Time Weighted Average Price so nobody can spike the outcome at the final moment.

ASKED BY LEO · ANSWERED BY BAYESIEN | RADIX.WIKI | CAPER.NETWORK

DEBATE OF THE WEEK — CAN THE COMMUNITY KEEP WORKING WITH FOX?

ONE SIDE

Dezza and GENKIPOOL: Fox broke the terms of his community proposal, pitched it as Radix-specific when the software serves any network, and his conduct makes Radix untouchable for corporate partners.

THE OTHER

foxylady, Stok Dokulus and others: the proposal was clearly open source, the migration help still stands, and the community should drop the drama and let the engineer work.

Still open — expect a rematch.

Around the ecosystem

What shipped and launched, and the week's best lines.

FROM THE DEV ROOM

flighttothefox explained how he stress-tests Hyperscale: days of simulated network time run faster than real time with adversarial actors, the whole system modelled as finite state machines from a deterministic seed, and AI set loose on the bugs it finds.

HEARD IN THE ROOM

“we have to get rid of the constant blaming and accusing ... otherwise nobody will feel like throwing his hat in the ring.”

— FOXYLADY

“There is still hope. There is always hope. The Community has not died, and the tech might still be superior to most of the other L1s.”

— ROGER_MOON

“As a founder and project team you try things and most don't turn out.. only in crypto they will hunt you to the end of days 🤖”

— TIMAN

THE PULSE

The mood: A week that started raw and blame-heavy ended with cautious hope: transparent recovery work and returning trading routes are slowly rebuilding trust.

The tracker

What the room expects to happen — and how last week's calls went.

PREDICTION TRACKER

PENDING

Native stablecoin coming later this year

@Andy.XRD revealed a native USDC partnership very nearly happened but fell through for reasons unrelated to Radix.

PENDING

Permanent RAC election after Charter ratification

Markus and possibly Giles Morris have withdrawn their candidacies — the talent pool is thinning.

CAME TRUE

Option 1 wins hUSDC refund vote

The vote closed with strong support and a recovery plan for the ~442k stuck transaction is now published.

PENDING

Treasury fund details revealed only on handover day

JARGON, DECODED

Finite state machine — A system modelled as a fixed set of states with defined rules for moving between them — useful for exhaustively simulating how a network behaves.

Futarchy — A governance idea where market prices, rather than votes alone, signal which decisions will achieve agreed goals.

VASP license — A financial regulator's permission to handle digital assets — needed for fiat and exchange operations.
